Preface	3
0. INTRODUCTION	9
1. GENERAL THEORY	13
1.1. Basic system of gas-dynamics equations	13
1.1.1 Equation of state	13
1.1.2 Continuity equation	14
1.1.3. Momentum equation	14
1.1.3.1. Momentum equation for ideal fluid	14
Components of acceleration	15
Integration of Euler dynamics equation	16
Case of unsteady flow of gas	18
1.1.3.2. Momentum equation for real fluid	19
Simplified differential momentum equation for real gas flow	19
Frictional pressure losses	22
Pressure losses caused by boundary friction	22
Local pressure losses	23
Applied form of equation	25
Determination of Darcy friction factor	25
1.1.4. Energy equation for a gas flow	26
1.1.4.1. Relation between energy equation and Bernoulli-Saint-Venant equation for adiabatic flow	28
1.2. General characteristics of gas flow	29
1.2.1. Total and static parameters of gas flow	29
1.2.1.1. Static and total temperatures of gas	29
1.2.1.2. Recovery temperature	31
1.2.1.3 Static pressure and total pressure	32
1.2.2. Gas flow states	33
2. ORIFICE MODEL	37
2.1. Theoretical basis	37
2.1.1. Isentropic orifice model	38
2.1.2. Calculating pneumatic conduits by the orifice model	40
