Preface	3
I. FUNDAMENTAL PART	7
1. FLUID PROPERTIES	7
1.1. Continuity	7
1.2. Density	8
1.3. State equations	8
1.4. Viscosity	10
1.5. Specific heat capacity	13
2. GENERAL NOTES ON FLUID MECHANICS	14
2.1. Simplified models in fluid mechanics	14
2.1.1. Models of fluids	15
2.1.2. Simplified flow models	15
2.2. Forces acting in fluids	16
3. FLUID STATICS	20
3.1. Euler's equation of fluid statics	20
3.2. Basic hydrostatics equation	21
3.3. Applications of the basic hydrostatics equation	24
3.4. Atmosphere equations	24
4. FLUID KINEMATICS	25
4.1. Description modes	25
4.2. Substantial acceleration and its components	27
4.3. Some concepts of fluid kinematics	29

4.4. Continuity equations	29
One-dimensional flow	30
Multi-dimensional flow	31
5. FLUID DYNAMICS	33
5.1. Momentum equations for ideal fluid	33
5.1.1. Euler's equation of fluid dynamics	33
5.1.2. Integrating the Euler's equations	34
5.1.3. Bernoulli's equation for steady flow	35
5.1.4. Bernoulli's equation for unsteady flow	36
5.1.5. Bernoulli-Saint-Venant equation	37
5.2. Momentum equation for a real fluid flow	38
5.2.1. Navier-Stokes equations	38
5.2.2. Bernoulli's equation for a real liquid	39
5.2.3. Simplified differential momentum equation for real gas flow	41
5.3. Euler's momentum theorem	42
5.4. Energy equation for a gas flow	45
5.5. Total and static properties of the gas flow	47
II. APPLIED PART	49
6. GENERAL CHARACTERISTICS OF REAL FLUID MOTION	49
6.1. Introductory notes	49
6.2. Laminar and turbulent flow	50
6.3. Similarity principle and non-dimensional numbers	51
6.4. Reynolds number	51

7. CALCULATION OF LAMINAR FLOW	53
7.1. Flow in the conduit of circular cross section	53
7.2. Flow between two parallel planes	55
8. CALCULATION OF TURBULENT FLOW	57
8.1. General principles	57
8.2. Pressure losses caused by boundary friction	57
8.3. Determining the Darcy's friction factor	59
9. LOCAL PRESSURE LOSSES	63
9.1. Abrupt enlargement	63
9.2. Abrupt contraction	66
9.3. Other local losses	66
9.4. Local losses in some special flow cases..	66
10. CALCULATION OF PIPE SYSTEMS	68
11. CALCULATION OF GAS FLOW	70
11.1. Some concepts of gas dynamics	70
11.2. Models for calculating the gas flow	72
11.3. Diabatic model	73
11.4. Adiabatic model	73
11.5. Isothermal model	80
12. FLUID EFFLUX FROM ORIFICE. ORIFICE MODEL	82
12.1. Liquid efflux	82
12.2. Gas efflux	85
12.3. Calculating the pneumatic conduits by the orifice model	87
Afterword	88
Notation	89
