List of Content

Introduction 6

1. System dynamics basics 8

1.1 Systems 9

1.2 System dynamics – the fundamental perspective 15

1.3 System dynamics – modelling techniques and tools 24

1.4 Defining the boundaries of a system 40

1.5 Modelling process of system dynamics 41

1.6 Generic system structures and behaviours 71

1.7 System Archetypes 78

1.8 Some system dynamics functions 89

2. Development of the Latvian energy sector; increasing the share of renewable energy 94

2.1 Formulation of the problem in Latvia; case analysis 95

2.2 Development of the dynamics hypothesis 116

2.3 Formulation and simulation of the model 118

2.4 Verification of the model 135

2.5 Analysis of the impact of policy instruments 137

3. A system dynamics model of building energy efficiency policy 158

3.1 Formulation of the problem 158

3.2 Development of the dynamic hypothesis 175

3.3 Model formulation and simulation 180

3.4. Model testing 191

3.5 Policy development and testing 194

3.6 Results 246

4. Packaging waste management tax policy and analysis of ecodesign effectiveness 260

4.1 Description of the problem 260

4.2 Creation of a model 265

4.3 Model testing 301

4.4 Analysis of policy 307

4.5 Summary and conclusions 342
