

# CONTENT

<b>Introduction</b>	5
<b>1. Linear Vibrodiagnostics</b>	6
<b>2. Novelty of Approaches to Nonlinear Vibrodiagnostics</b>	10
<b>3. Diagnostics of Objects of the First Type</b>	15
<b>4. Local Methods of Vibrodiagnostics of Damages in Thin-Walled Structures</b>	22
4.1. Method of Added Mass	22
4.2. Diagnostic Devices and Systems Based on the MAM	26
<b>5. Diagnostics of Objects of the Second Type</b>	32
5.1. Testing Objects with Dry Friction and Analysis of their Possible Failures	32
5.2. Development of Vibration Procedures for Non-Destructive Testing	35
<b>6. Diagnostics of Objects of the Third Type</b>	39
6.1. Nonlinear Electro Capacitance Methods of Nondestructive Testing	39
6.2. Vibration Analysis of Viscosity of Liquids	43
6.3. Nonlinear Vibration Methods of Flow Metering	46
<b>7. Diagnostics of Objects of the Fourth Type</b>	52
7.1. Vibration Detection of Fatigue Cracks in Flexible Geometrically Nonlinear Bars	52
7.2. Detection of Cracks in Rotor Systems	57
<b>References</b>	62
<b>Appendices</b>	72
