

CONTENT

INTRODUCTION	6
PROGRAMME	7
Anomalies of the float glass surface	12
Why periodic mesoporous ordered (PMO) silica-based materials? bulk solids vs thin films	13
Oxide glasses with magnetic nanoparticles	14
Porous ceramics decorated with nanowires	15
Low base calcium silicate hydrates: synthesis, properties and application	16
Preparation of boron suboxide nanoparticles and their processing	17
Two-stage mechanism of nano-cones formation by laser radiation on a surface of elementary semiconductors and solid solutions	18
Antibacterial glass-composite coatings for protection of special purpose steel panels	20
Influence of zinc ions on the gyrolite surface parameters	21
The research of adsorptive characteristics of expanded hydrophobic aluminosilicates	23
Formation of direct-on enamels for line pipes and theirs adherence strength	24
Structure and properties of protective-technological soil enamel coverings on the basis of mineral raw materials of Uzbekistan	25
Feasibility of metallurgical waste encapsulation in clay formed matrix	27
Status of solid oxide fuel cell (sofc) research at forschungszentrum Jülich with an emphasis on the cell materials and processing development	28
Inhomogeneous structure of optical glasses studied by rayleigh, mandel'shtam-brillouin, raman scattering spectroscopy and acoustic methods	29
Powder electrostatic enamelling of household appliances in Ukraine	31

Characterization of the microstructure, chemical composition and mechanical properties of glass-ceramics containing industrial waste	32
Stresses relaxation mechanism in the Si-SiO ₂ system and its influence on the interface properties	33
Synthesis and characterization of nanostructured stoichiometric and non-stoichiometric Ni-Zn ferrites	34
Magnetic properties and morphology of manganese ferrite nanoparticles in glasses	35
Elastic properties and nanoinhomogeneous structure of silicate glasses	37
The evaluation of illite/kaolinite clay submicrometer particulate materials for the development of geopolymer type solids	38
Spark plasma sintering of sialon nanopowders	39
Study and visualisation of the grain-size composition distribution of a bedrock clay deposit	41
Application of metal coatings for functionalization of technical fibers and fabrics	43
Assessment of weathering of construction blocks and mortar in historical monuments	44
Development of refractory concrete for extreme conditions	45
Desalination of brick masonry and stone carvings in capithulum hall of Riga dome cathedral	47
AFM studies of sol-gel derived Fe ₂ O ₃ -TiO ₂ dip-coatings	48
Effect of curing conditions on the properties of activated illite-based clays	49
Alumina lightweight ceramics modified with plasma synthesized nanopowders	51
Mullite – ZrO ₂ ceramics prepared by various methods	52
Porosity reduction of borosilicate glass enamel by TiO ₂ -SiO ₂ sol-gel coatings	54

Thermodynamic evaluation of the major synthesis factors influence on the formation of analcime	55
Studies of Jurassic clayey deposits of Latvia: composition of Jurassic clayey deposits at Strēji site	57
Formation of calcium containing minerals in the low temperature dolomitceramics	58
Effect of hydrosodalite on the properties of dry mixtures	59
Illite-smectite component in the Latvian clayey sediments	61
Diversity of Latvian quaternary clay and possibilities of its selective extraction	62
Pozzolanic activity of encaustic Lithuanian industry clays	63
Clinker bricks based on loess clay loam Uzbekistan	65
Investigation of stone materials at the Riga stock exchange building	67
Dolostone and clay resources of Latvia as a source of new composite materials	69
Photocatalytic activity of TiO ₂ coatings deposited onto porous silica glass fibres	70
Synthesis of nanoparticles by redox initiated process and preparation of their polymeric nanocomposites	72
The hydrothermal synthesis of hydrotalcite by using Al ³⁺ rich raw materials	73
Production of glass-ceramics from sewage sludge and waste glass	75
Enamel coverings for aluminium products from raw materials of Uzbekistan	76
The influence of silica fume to the tricalcium aluminate hydration and the effects of chloride ions to formed hydrates	77
α-semihydrate gypsum obtained from technogenic materials	79
Incorporation of organic waste combustion residue in building ceramic	80

Research of the microstructure of porcelain materials on the basis of local raw materials	82
Disintegration of Al-W-B composite material: particle morphology and energy consumption analysis	83
Hydrothermal synthesis of ZrO_2 and its composites	85
Influence of various factors on the glass fibre breakage rate	86
Influence of the dosage of super plasticizer on properties of high performance concrete	87
Effect of sintering process and additives on the properties of cordierite based ceramics	88
Influence of kaolin and firing temperature on the mullite formation in porous mullite-corundum materials	89
