Parametric Multicarrier Systems with Rotation Based Modulation

Modulation, Synchronization, Equalization

LAP LAMBERT Academic Publishing

Contents

List of abbreviations	11
Nomenclature	13
1 General description of the work	15
1.1 Urgency of the subject matter	15
1.2 Objective of the work	17
1.3 Scientific novelty and main results	18
1.4 Theses to be defended	19
1.5 Research technique	19
1.6 Research object	20
1.7 Practical significance of the research	21
1.8 Approbation	21
1.9 Structure of the work	22
2 Baseband components	24
2.1 Formulation of the problem	24
2.1.1 Objective	24
2.1.2 Tasks	24
2.2 Structure of a parametric multicarrier system	24
2.2.1 Introduction	24
2.2.2 Transmitter baseband	25
2.2.3 Receiver baseband	27
2.3 Structures of baseband signals	28
2.3.1 Continuous transmission	28
2.3.2 Block-wise transmission	28
2.3.2.1 Equation form	29
2.3.2.2 Matrix form	29
2.3.3 Block framing	30
2.3.4 Block padding	31
2.3.4.1 Cyclic prefix	31
2.3.4.2 Zero padding	31
2.3.4.3 Unique word	32
2.4 Synchronization sequences	32
2.4.1 Introduction	32
2.4.2 Adding and removal of synchronization sequences	33
2.4.2.1 Inserted sequences	33
2.4.2.2 Super-imposed sequences	34
2.4.3 Review of the UW sequences	36
2.4.3.1 Zadoff-Chu sequence	36
2.4.3.2 Schmid-Cox sequence	38
2.4.4 Impact of communication channel on the training sequences	38
2.4.4.1 Cross-correlation	38
2.4.4.2 Autocorrelation	40
2.5 Transmit filtering and upconversion	41
2.6 Conclusions	43
2.7 Summary of contributions	43

3	Multicarrier modulation	44
3.1	Formulation of the problem	44
3.1.1	Objective	44
3.1.2	Tasks	44
3.2	Unitary transforms for digital modulation	44
3.2.1	Identity transform	44
3.2.2	Fourier transform	45
3.2.3	Complex Hadamard transform	45
3.2.4	Generalized Unitary Rotation transform	45
3.2.4.1	Fast creation of unitary bases with a desired first basis function	46
3.2.4.1.1	Algorithm for vectors with length $N = 2^Z$	47
3.2.4.1.2	Algorithm for vectors with length $N = Z$	47
3.2.4.2	Classification of GUR transforms	49
3.2.4.2.1	CCRAOT	49
3.2.4.2.2	CCRAIMOT	50
3.2.4.2.3	RABOT	51
3.3	Configurations of multicarrier modulator and demodulator	51
3.3.1	Parametric multicarrier system with matrix-based transform algorithm	51
3.3.1.1	Example of generalized unitary rotation transformation	51
3.3.2	Parametric multicarrier system with a tree-like transform algorithm	53
3.3.2.1	Factorization of GUR using tree-like structures	53
3.3.3	Transmultiplexer	55
3.3.3.1	Introduction	55
3.3.3.2	GUR-based transmultiplexer	56
3.3.4	Subband coder	57
3.3.4.1	Introduction	57
3.3.4.2	GUR-based subband coder	57
3.3.5	Performance comparison of multicarrier modulators: simulation results	58
3.4	Peak-to-average power ratio of a multicarrier signal	59
3.4.1	PAPR reduction using super-imposed sequences	60
3.5	Transform selection for a parametric multicarrier system	60
3.5.1	Parametric multicarrier systems	62
3.6	Conclusions	63
3.7	Summary of the contributions	63
4	Timing offset synchronization	64
4.1	Formulation of the problem	64
4.1.1	Objective	64
4.1.2	Tasks	64
4.2	Overview	64
4.3	Block synchronization	65
4.3.1	Impact of block timing offset	65
4.3.2	Block timing offset estimation	66
4.3.2.1	Data-aided block timing offset estimation	66

4.3.2.1.1	Overview	66
4.3.2.1.2	Data-aided BTO estimation in GUR -based parametric multicarrier systems	67
4.3.2.1.3	Maximum likelihood AC-based block timing offset estimator	68
4.3.2.2	Decision-directed block timing offset estimation	70
4.3.2.2.1	Cross-correlation -based BTO estimation for GUR-based parametric multicarrier systems	70
4.3.2.3	Combined block timing offset synchronizer	72
4.3.3	Block timing offset correction	72
4.3.3.1	Overview	72
4.3.3.2	PID controller-based feedback synchronizer	73
4.3.3.2.1	Simulation results of the synchronizer	73
4.4	Frame synchronization	74
4.4.1	Frame timing offset estimation	74
4.4.2	Frame timing offset correction	75
4.5	Conclusions	75
4.6	Summary of the contributions	76
5	Frequency synchronization	77
5.1	Formulation of the problem	77
5.1.1	Objective	77
5.1.2	Tasks	77
5.2	Types of frequency offset	77
5.2.1	Introduction	77
5.2.2	Carrier frequency offset	77
5.2.3	Sampling frequency offset	79
5.3	Impact of frequency offset in GUR-based PMC systems	80
5.3.1	Overview	80
5.3.2	Impact of carrier frequency offset	80
5.3.3	Impact of sampling frequency offset	80
5.3.4	Experimental evaluation of the impact caused by CFO and SFO	80
5.4	Carrier frequency offset estimation	81
5.4.1	Overview	81
5.4.2	Data-aided fractional carrier frequency offset estimators	83
5.4.2.1	Repeating block autocorrelation	83
5.4.2.2	Maximum likelihood AC-based estimator	86
5.4.2.3	Improved autocorrelation-based estimator	86
5.4.2.4	AC-based fractional CFO estimator for GUR-based PMC systems	86
5.4.2.5	Average phase increment method	87
5.4.3	Decision-directed fractional carrier frequency offset estimators	89
5.4.3.1	Method with increment averaging	89
5.4.3.2	Least squares -based method	90
5.4.3.3	Method for CAZAC sequences	91
5.4.3.4	Simulation results of fractional carrier frequency offset estimators	91

5.4.4	Combined fractional carrier frequency offset estimator	96
5.4.5	Conclusions about fractional carrier frequency offset estimation	96
5.5	Residual phase offset estimation	97
5.5.1	Introduction	97
5.5.2	Phase offset estimation for GUR-based PMC systems	98
5.6	Carrier frequency offset and phase correction	98
5.6.1	Introduction	98
5.6.2	Use of FD equalization	99
5.6.3	Tracking loop	99
5.6.4	Phase offset correction	99
5.7	Fractional carrier frequency offset synchronization in GUR-based PMC system	100
5.7.1	FCFO synchronization dynamics in a GUR-based PMC system	100
5.7.1.1	Fractional carrier frequency offset acquisition	100
5.7.1.2	Fractional CFO tracking	101
5.8	Conclusions .	102
5.9	Summary of the contributions	104
6	Channel estimation and equalization	105
6.1	Formulation of the problem	105
6.1.1	Objective	105
6.1.2	Tasks .	105
6.2	Introduction . . .	105
6.3	System model . .	106
6.4	Disturbances caused by the communication channel	107
6.4.1	Introduction	107
6.4.2	Inter-symbol interference	108
6.4.3	Inter-carrier interference	108
6.4.4	Double orthogonality condition	108
6.5	Channel estimation	109
6.5.1	Time domain channel estimation	109
6.5.1.1	Trivial methods for TD channel estimation .	109
6.5.1.1.1	Delta function method .	109
6.5.1.1.2	Identity matrix method .	109
6.5.1.2	Back-substitution method	110
6.5.1.3	LMS system identification method	110
6.5.2	GUR domain channel estimation	111
6.5.2.1	Identity matrix method for GD channel estimation	111
6.5.2.2	GD channel estimation using conversion from the TD .	111
6.5.3	Frequency domain channel estimation .	112
6.6	Channel equalization	114
6.6.1	Time domain equalization	114
6.6.1.1	LMS algorithm .	114
6.6.1.2	RLS algorithm .	115
6.6.1.3	Equalization using super-imposed training signals	115
6.6.2	Frequency domain equalization	115
6.6.3	GUR domain equalization	116

6.6.3.1	SVD-based equalization	116
6.7	Simulation results of equalization	118
6.8	Comparison of channel estimation and equalization methods	119
6.8.1	Simulation of different equalizers	121
6.9	Conclusions	123
6.10	Summary of the contributions	123
7	Design of parametric multicarrier system	125
7.1	Formulation of the problem	125
7.1.1	Objective	125
7.1.2	Tasks	125
7.2	Introduction	125
7.3	Structure of the parametric multicarrier system	125
7.3.1	Transmitter	126
7.3.2	Receiver	127
7.3.2.1	Timing and frequency synchronization	127
7.3.2.2	Channel estimation	129
7.3.2.3	Equalization	129
7.3.3	Baseband communication channel	129
7.4	Simulation results of the model	130
7.5	Conclusions	131
7.6	Summary of the contributions	132
8	Utilization of the obtained results for future research	133
	Final conclusions	134
	Appendix A	136
	Appendix B	138
