

RIGA TECHNICAL UNIVERSITY

Information Technologies and Tools for Space-Ground Monitoring of Natural and Technological Objects

Collective Monograph

Editors

Yuri A. Merkurjev, Galina V. Merkurjeva,
Boris V. Sokolov, Viacheslav A. Zelentsov

Reviewers: F. Longo, E. Ginters

RTU Press
2014

Contents

List of Contributors	5
List of Tables	7
List of Figures	9
Preface	11
1 State of the Art in Space and Ground-based Monitoring of Natural and Technological Objects.	13
1.1 Methodology and Trends for Monitoring and Control of Complex Systems.	13
1.1.1 Overview of Models of Natural and Technological Object Monitoring and Control	13
1.1.2 Integrated Conceptual Framework for Natural and Technological Object Monitoring and Control	16
1.1.3 Intelligent Monitoring Technology Based on Integrated Ground and Space Data	19
1.2 Project Methodology: Concepts, Principles, Requirements, and Approaches	22
1.2.1 Conceptual Modelling of Monitoring and Control Systems for Natural and Technological Objects.	22
1.2.2 Formalisation of Structural Dynamics and Control Problem for Monitoring Natural and Technological Objects	23
1.2.3 Modern Optimal Control Theory Application in Monitoring and Control of Natural and Technological Objects	25
2 Innovative Information Technologies for Integrated Space and Ground-based Monitoring	31
2.1 Data Processing and Integration.	31
2.1.1 Heterogeneous Information from Different Data Sources	31
2.1.2 Review of Crowdsourcing Technology	32
2.1.3 Crowdsourcing in the Tasks of Monitoring	33
2.1.4 Integration of Traditional and Social Data	35
2.1.5 Crowdsourcing-based Information Processing Framework	36
2.2 Geographic Information Systems and Simulation	39
2.2.1 Geographic Information Systems	39
2.2.2 Simulation Modelling	39
2.2.3 Geosimulation	40
2.3 Automation, Intellectualisation, and Reconfiguration in Natural and Technological Object Monitoring and Control Systems.	41

2.3.1	Modern Theories of NTO MCS Automation, Intellectualisation, and Reconfiguration	41
2.3.2	Implementation of Proposed Automation, Intellectualisation Procedures	51
3	Integrated Distributed Information Network and Support Tools for Intelligent Space and Ground-based Monitoring	61
3.1	Integrated Distributed Network Framework and Infrastructure.	61
3.2	Support Tools for Intelligent Space and Ground-based Monitoring of River Floods	64
3.2.1	Advanced Approach to River Flood Modelling and Monitoring	64
3.2.2	Flood Model-based Forecasting System and Support Tools.	65
3.2.3	Short-term Forecasting Algorithm.	66
3.3	Support Tools for Integrated Forest Monitoring	68
3.3.1	General Approach to Evaluating the State of Forest Tracts	68
3.3.2	Numerical Characteristics for Updating the Forest Taxation Description.	69
3.3.3	Numerical Characteristics for Evaluating Forest Fire Safety Conditions	70
3.4	Monitoring Facilities and Support Tools for Information Processing of Water Pollution.	72
3.4.1	Oil Pollution Monitoring	72
3.4.2	State Monitoring of the Overgrown Lake	73
4	Demonstration Cases and Real-time Experiments	77
4.1	Simulation-based Daugava River Flood Forecasting	77
4.1.1	The Flooding Problem	77
4.1.2	River Flood Modelling Software	78
4.1.3	Water Level Forecasting, Flow Discharge Estimation, and Raster-based Modelling.	79
4.1.4	A Short-term Flooding Forecast for the Daugava River.	80
4.1.4.1	Input Data Collection and Pre-processing.	80
4.1.4.2	Flood Forecasting and Modelling	82
4.1.4.3	Post-processing and Visualisation of Modelling Results	84
4.2	Integrated Forest Monitoring at Madona Municipality and in Pskov Region	86
4.3	Monitoring of Oil Pollution and Overgrowing of Lake	94
4.4	Increasing Quality of Input Topographic Data	102
4.5	Summary	105
	Summary: Take up Actions.	107
