RTU Press  
Riga, 2015

This book has been prepared by the financial support of the European Union. The authors from Riga Technical University, Belarusian National Technical University, Belarusian State University; KU Leuven University; University of Pristina in Kosovska Mitrovica; «Dunarea de Jos» University of Galati; and Vilnius University are responsible for the content of this document and it can not be regarded as the European Union's official position.

The book is developed within the frames of project “Development of Training Network for Improving Education in Energy Efficiency” acronym: ENERGY, grant Nr. 530379-TEMPUS-1-2012-1-LVTEMPUS-JPCR.

Project was approved by the European Commission in frame of **program** Tempus IV – Fifth call for proposals (**Programme guide** EACEA/25/2011).

The textbook is devised for students, who study energy saving technologies technology issues. The textbook can be useful for students and professionals, who deal with energy saving technologies in generation, conversion, transmission and distribution of electrical energy, in public and private sectors, in smart metering and in other application fields.

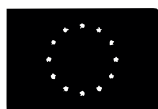

**Sub-programme:** Joint Projects

**Action:** Curricular Reform

**Deliverable:** 2.1 Development and translation of study courses within the frame of direction enhancement of energy efficiency (EEE).

This project has been funded with support from the European Commission Project. This publication reflects the views only of the author, and the Commission cannot be held responsible for any use, which may be made of the information contained therein.

**Reviewers:** Prof., Dr.habil.sc.ing. **Andris Šnīders**, Latvia University of Agriculture  
Senior researcher **Tanel Jalakas**, Tallinn University of Technology

Tempus

Project Scientific Manager **Leonids Ribickis**

Project Manager **Anatolijs Zabasta**

Editors: **Anastasia Zhiravetska** (proofreading), **Nadezhda Kunicina**

Coordinator institution **Riga Technical University**

# Contents

- Contributors** .....3
- Executive summary** .....7
- Introduction**.....8
- 1. Energy Saving Technologies in Generation, Conversion of Electrical Energy** .....9
  - 1.1. Cogeneration* ..... 10
    - 1.1.1. Introduction ..... 10
    - 1.1.2. Performance indices of cogeneration systems ..... 12
    - 1.1.3. Types of cogeneration systems ..... 13
    - 1.1.4. Distributed energy resources ..... 32
  - 1.2. Smart metering concept* ..... 38
    - 1.2.1. Introduction ..... 38
    - 1.2.2. Communication concept of smart metering..... 39
    - 1.2.3. Wireless sensor networks in smart metering..... 48
    - 1.2.4. Security issues ..... 52
    - 1.2.5. The future of smart metering ..... 55
- 2. Energy Saving Technologies in Transmission, Distribution of Electrical Energy..** 57
  - 2.1. Energy cost and power loss minimization in distribution networks with distributed generation*..... 58
    - 2.1.1. OPF problem formulation for distribution networks ..... 59
    - 2.1.2. Objective function ..... 60
    - 2.1.3. Constraints ..... 61
    - 2.1.4. DG units modeling for optimal power flow..... 62
    - 2.1.5. OPF solution using multi-objective genetic algorithm..... 69
    - 2.1.6. OPF solution using gravitational aearch algorithm ..... 78
  - 2.2. DC transmission systems* ..... 90
    - 2.2.1. Historical evolution from AC-grids to DC-grids ..... 90
  - 2.3. Electricity losses caused by corona discharge in the overhead lines and the construction-material methods reduce them* ..... 114
  - 2.4. Reduction of electric energy losses, fuel consumption and greenhouse gases emission by reactive power compensation in electric receivers*..... 124
- 3. Energy Saving Technologies: in Industry** ..... 131
  - 3.1. *Electric motors* ..... 132
  - 3.2. *Electrical drives*..... 139
- 4. Energy Saving Technologies: in Public and Private Sector** ..... 157
  - 4.1. Effective lighting*..... 158
    - 4.1.1. Key elements of lighting system..... 159
    - 4.1.2. LED as a energy saving light source ..... 160
    - 4.1.3. Transformer types available..... 163
    - 4.1.4. Existing communication interfaces..... 163
    - 4.1.5. Street lighting system as a practical example of energy saving technologies ..... 166

4.1.6. Radio based control solutions.....	168
4.1.7. Smart street lighting control system example .....	171
4.1.8. Introduction to redundant system solution .....	184
<b>4.2. Supercapacitors.....</b>	<b>194</b>
4.2.1. Introduction .....	194
4.2.2. Supercapacitor design .....	198
4.2.3. Supercapacitor energy storage systems.....	202
4.2.4. Simulation of supercapacitor energy storage system .....	207
4.2.5. ESS scaling .....	212
4.2.6. Conclusions .....	220
4.2.7. Tasks .....	220
<b>5. Standartisation and Legal Bases on Existing Energy Saving Technologies .....</b>	<b>223</b>
5.1. <i>Introduction</i> .....	224
5.2. <i>Legislative base mandatory for EU Member states</i> .....	227
5.3. <i>Legislative base non - mandatory for EU Member states</i> .....	230
5.4. <i>EU supported actions for development of Energy Saving Technologies</i> .....	234
5.4.1. <i>Technology roadmaps:</i> .....	235
5.4.2. <i>ISO 50001 - Energy management</i> .....	237
5.5. <i>Conclusions</i> .....	238
