Hydrogen Energy

Coordinator Leonids Ribickis

Aleksandrs Andreiciks
Ingars Steiks

Mathias Belpaeme
Victor Bashtovoi

RTU Press
Riga, 2015

This book has been prepared by the financial support of European Union. Authors from KU Leuven – KU LaB (BE), Belarusian National Technical University (BY), Riga Technical University (LV) are responsible for the content of this book. This publication reflects the views only of the authors, and it can not be regarded as the European Union's official position.

The book is developed in a frame of the project “Development of Training Network for Improving Education in Energy Efficiency” acronym: ENERGY, grant Nr. 530379-TEMPUS-1-2012-1-LVTEMPUS-JPCR.

Project was approved by the European Commission in frame of the Program Tempus IV – Fifth call for proposals (Programme guide EACEA/25/2011).

The textbook is devised for students, who study hydrogen energy issues. The textbook can be useful for students and professionals, who deal with production, transportation and storage of hydrogen, utilization of fuel cell energy, fuel cell DC/DC converters and other hydrogen energy technology issues.

Sub-programme: Joint Projects

Action: Curricular Reform

Deliverable: 2.1 Development and translation of study courses within the frame of direction Hydrogen Energy

Reviewers: Dr. phys. **Janis Kleperis**, Head of Hydrogen Energy Materials laboratory, Institute of Solid State Physics, University of Latvia.

Dr. **Arturs Purvins**, researcher, European Distributed Energy Resources Laboratories (DERlab) e.V.

Tempus

Project Scientific Manager **Leonids Ribickis**

Project Manager **Anatolijs Zabasta**

Editor **Ingars Steiks**

Developmental Editor **Peteris Lesnicenoks**

Proofreading **Anastasia Zhiravetska**

Institution **Riga Technical University**

Contents

Introduction	7
1. Characteristics of Hydrogen	9
2. Production, Transportation and Storage of Hydrogen.....	15
2.1. Hydrogen production	16
2.1.1. Hydrogen from fossil fuels.....	17
2.1.2. Hydrogen from splitting of water.....	19
2.1.3. Biomass to Hydrogen.....	27
2.2. Hydrogen storage systems.....	28
2.2.1. Physical methods of hydrogen storage	28
2.2.2. Chemical methods of hydrogen storage.....	30
2.2.3. Laboratory work “Investigation of metal-hydride hydrogen accumulator”	33
2.3. Solar hydrogen technology	34
2.3.1. Laboratory work “Investigation of solar hydrogen technology”	35
2.4. Hydrogen combustion	38
2.4.1. Introduction.....	38
2.4.2. Internal combustion engine basics.....	39
2.4.3. Hydrogen as an internal combustion fuel.....	45
3. Utilization of Fuel Cell Energy	59
3.1. Characteristics of the Fuel Cell in General	60
3.1.1. Basic reactions	60
3.1.2. Heat of reactions.....	60
3.1.3. Electrical wor	60
3.1.4. Potential.....	61
3.1.5. Temperature	61
3.1.6. Efficiency	61

3.2. Investigation of the fuel cell	62
3.2.1. Electricity production by fuel cells.....	62
3.2.2. Investigation of fuel cell batteries.....	70
3.2.3. Laboratory work “Investigation of Fuel Cell Bateriaes”	71
3.2.4. Investigation of portable fuel cells applications	72
3.2.5. Laboratory work “Investigation of conversion of hydrogen energy to electrical and mechanical energy”.....	76
3.3. Fuel cell DC/DC converter design and experimental investigation.....	79
3.3.1. Suitable DC/DC converter topologies for fuel cell application.....	79
3.3.2. Current fed double inductor DC/DC converter design.....	87
3.3.3. Experimental tests	90
3.3.4. Summary of DC/DC converter design.....	92
References.....	93
