Yulia Zhukova

This book has been prepared by the financial support of European Union. Authors from Riga Technical University, Belarusian State University, Qafqaz University, and National Aviation Academy of Azerbaijan are responsible for the content of this document. This publication reflects the views only of the authors, and it cannot be regarded as the European Union's official position.

The book is developed in a frame of the project “Development of Training Network for Improving Education in Energy Efficiency” acronym: ENERGY, grant Nr. 530379-TEMPUS-1-2012-1-LVTEMPUS-JPCR.

Project was approved by the European Commission in frame of the Program Tempus IV – Fifth call for proposals (Programme guide EACEA/25/2011).

The textbook is devised for students, who study gas and hydrodynamics issues. The textbook can be useful for students and professionals, who deal with fluid kinematics and dynamics, hydraulic losses in pipe flow, heat conduction theory, methods for determining of thermo-physical characteristics and other gas and hydrodynamics issues.

Sub-programme: Joint Projects

Action: Curricular Reform

Deliverable: 2.1 Development and translation of study courses within the frame of direction of Gas and Hydrodynamics.

Reviewers: ass. Prof., ing. PhD **Jana Parilkova**, Brno University of Technology, Faculty of Civil Engineering, Department of Water Resources

Prof., Dr. habil. **Saulius Vaikasas**, Water Resource Engineering Institute at ASU, Lithuania

Tempus

Project Scientific Manager **Leonids Ribickis**

Project Manager **Anatolijs Zabasta**

Managing Editor **Roberts Neilands**

Proofreading **Anastasya Zhiravetska**

Institution **Riga Technical University**

Contents

Introduction	11
1. Properties of Fluid	13
1.1. Fluids	14
1.2. Units and dimensions	14
1.3. Density and specific weight	17
1.4. Viscosity	17
1.5. Surface tension	19
1.6. Newtonian and non-Newtonian fluids	21
2. Fundamentals of Fluid Kinematics and Dynamics	23
2.1. Conservation laws for the motion	24
2.1.1. Laws of mass, momentum and energy conservation	24
2.1.2. Basic equations: continuity equation, equations of motion and energy ...	28
2.2. Generalized Newton law of viscous friction	29
2.3. Motion equations for viscous continuum: Navier–Stokes equations	32
3. The Bernoulli Equations	37
3.1. Euler’s equation of motion	38
3.2. Bernoulli equation for ideal flow	39
3.3. Bernoulli equation for real flow	41
3.4. Various forms of Bernoulli equations	43
3.4.1. Energy form	43
3.4.2. Head form	43
3.5. Bernoulli equation for gas	44
3.6. Practical application examples	46
3.6.1. Pitot Tube	46
3.6.2. Siphon	47
3.6.3. Prandtl’s static pressure tube	48
4. Hydraulic Losses in Pipe Flow	49
4.1. Shear stress in laminar flow	50
4.2. Shear stress in turbulent flow	52
4.2.1. Velocity distribution in turbulent flow	54
4.3. Shear stress interaction with hydraulic losses	54
4.4. Major hydraulic losses	56
4.4.1. Darcy–Weisbach equation	59
4.4.2. Hazen–Williams equation	61
4.4.3. Hydraulically equivalent pipes	62
4.4.4. Pipe networks	64
4.4.5. Major head loss in gas pipelines	67
4.4.5.1. Hydraulic calculation of a low-pressure gas pipelines	68

4.4.5.2. Hydraulic calculation of gas pipelines at high differential pressures	68
4.4.5.3. Head loss in ventilation ducts	69
4.4.6. Practical application examples	70
4.5. Minor hydraulic losses.	76
4.5.1. Minor hydraulic losses in sudden expansion (Borda–Carnot equation) . .	77
4.5.2. Minor hydraulic losses in sudden contraction	80
4.5.3. Minor hydraulic losses in curve	82
4.5.4. Minor hydraulic losses in tee.	83
4.5.5. Minor hydraulic losses in gradual contraction.	86
4.5.6. Minor hydraulic losses in gradual expansion.	86
4.5.7. Minor hydraulic losses in valves	87
4.5.8. Minor hydraulic losses and Reynolds number	88
4.5.9. Practical application example	89
5. Flow in Open Channels.	91
5.1. Uniform steady flow in open channels. Basic equations.	93
5.2. Normal depth of the flow in channel.	97
5.3. Specific energy of the cross section. Critical depth	98
5.4. Critical slope	101
5.5. Velocities restriction at open channel design.	101
5.6. Steady non-uniform gradually varied flow in open channels. Basic differential equation	102
5.6.1. General form of basic differential equation	102
5.6.2. Second form of the basic differential equation	104
5.7. Practical application examples	105
6. Flow in Wastewater Treatment Units.	107
6.1. Specific aspects of wastewater flows.	108
6.1.1. Flow regimes.	108
6.1.2. Flow regimes in wastewater treatment units.	109
6.1.3. Practical application example – flow rate estimation	110
6.2. Bar racks / Screens	111
6.2.1. Types of screens	111
6.2.2. Hydraulic analysis.	112
6.2.3. Design channel depth.	113
6.2.4. Screenings volume	114
6.2.5. Practical application example – screen design velocity.	114
6.3. Grit removal	115
6.3.1. Hydraulic analysis	116
6.3.2. Grit settling velocity	116
6.3.3. Required length/diameter	117
6.3.4. Grit storage time	118
6.3.5. Practical application example – grit chamber design	118
6.4. Clarifiers.	119
6.4.1. Sedimentation basin shapes.	119
6.4.2. Classes of sedimentation	120

6.4.3. Settling basin size determination	122
6.4.4. Ideal sedimentation basin design practice	123
6.4.5. Detention Time	125
6.4.6. Surface loading rate	126
6.4.7. Solids loading rate	126
6.4.8. Weir loading rate	127
6.4.9. Surface area	127
6.4.10. Practical application example – sedimentation tank design	127
6.5. Trickling filters	128
6.5.1. Hydraulic design equations	129
6.5.1.1. NRC Formula	129
6.5.1.2. Eckenfelder Formula 1	129
6.5.1.3. Hydraulic Loading	130
6.5.1.4. Organic Loading	130
6.5.1.5. Flushing Intensity	130
6.5.1.6. Distributor Rotational Speed	131
6.5.1.7. Actual velocity	131
6.5.1.8. Pressure head	131
6.5.2. Practical application example – trickling filter design	132
6.6. Activated sludge	132
6.6.1. Hydraulic characteristics of reactor tanks	133
6.6.1.1. Plug flow system	133
6.6.1.2. Completely-mixed system	133
6.6.2. Hydraulic phenomena in activated sludge tanks	134
6.6.2.1. Factors affecting the hydraulics of flow	135
6.6.3. Aeration	136
6.6.3.1. Air piping	136
6.6.4. Design aspects	137
6.6.4.1. Required aeration volume	137
6.6.4.2. Return activated sludge (RAS) rate	137
6.6.4.3. Solids retention time (SRT)	138
6.6.4.4. Food to mass (F/M) ratio	138
6.6.4.5. Sludge wasting rate, mass based	138
6.6.4.6. Oxygen requirements	138
6.7. Sludge Thickeners	139
6.7.1. Hydraulic loading rate	140
6.7.1. Sludge detention time	140
6.7.2. Solids loading rate	140
6.8. Wastewater treatment plant hydraulic profiles	140
7. Gas and Liquid Streams Diagnosis	143
7.1. Flow sensors	144
7.1.1. Thermal flow meters	144
7.1.2. Hydrodynamic (aerodynamic) flow meters	150
7.1.3. Electromagnetic flow meters	152
7.1.4. Ultrasonic flow sensors	153

7.2. The viscosity of liquids measurement	159
7.2.1. Capillary viscosimeters	161
7.2.2. Rotational viscosimeters	164
7.2.3. The falling ball method	166
8. Introduction to the Heat Conduction Theory	169
8.1. The differential equation of heat conduction	171
8.1.1. Boundary conditions	171
8.2. Differential equations of convective heat transfer	178
8.2.1. The energy equation	180
8.2.2. The equations of motion	182
8.2.3. Continuity equation	185
8.2.4. Conditions of uniqueness	187
8.2.5. The hydrodynamic and thermal boundary layers	188
8.2.5.1. Terms of «sticking»	188
8.2.5.2. The equation of heat transfer	188
8.2.5.3. Hydrodynamic boundary layer	189
8.2.5.4. Thermal boundary layer	190
8.2.5.5. Similarity of the convective heat transfer processes	191
9. Experimental Methods for Determining of Thermo Physical Characteristics	199
9.1. Methods for measuring the temperature	200
9.1.1. The study of resistance thermometers and their graduation	201
9.1.2. Thermoelectric phenomena. Temperature measurement using thermocouples	203
9.2. Methods for measuring thermal conductivity and thermal diffusivity	206
9.2.1. Non-stationary methods of determining of thermophysical characteristics in initial stage of heat transfer in the absence of heat sources	208
9.2.2. Determination of the thermal diffusivity coefficient in the regular mode	209
9.2.3. Determination of thermal conductivity coefficient by a comparative method in the steady state	210
9.2.4. Determination of thermophysical characteristics in a medium of constant temperature in the presence of heat source	211
9.2.5. Non-stationary methods of determining the thermophysical characteristics in the initial stages of heat exchange	212
9.2.6. Determination of thermophysical characteristics of solid materials in regular mode	215
9.2.7. Determination of thermal conductivity coefficient in the steady state	216
9.2.8. Pulse methods for determining the thermophysical characteristics	217
9.2.9. The method of pulsed linear heat source	218
9.2.10. Method of pulse plane heat source	219
9.3. Determination of heat transfer coefficients with the free and forced convection	220
9.3.1. Heat irradiation at free convection	221
9.3.2. Heat irradiation at forced convection	223
9.3.3. Heat irradiation at forced transverse flow around a cylinder	225
9.4. Methods for determination the heat capacity	226

10. Simulation of Fluid Dynamics, Heat and Mass Transfer in Flows	235
10.1. Fluid flow features and parameters	239
10.1.1. Basic turbulence contribution to fluid flow processes	239
10.1.2. Distinctive features of laminar and turbulent transfer	239
10.1.3. Mixing-controlled reactive flows and flames	241
10.1.4. State parameters of heat and mass transfer in the flow field	244
10.1.5. Mixture fraction concept for reactive flows	245
10.1.6. Progress variable concept for reactive flows	246
10.1.7. Problem in calculating averaged chemical reaction rate	247
10.2. Modeling approaches of fluid dynamics	250
10.2.1. Direct Numerical Simulation	253
10.2.2. Large Eddy Simulation	254
10.2.3. Reynolds-averaged Navier–Stokes approach	254
11. Modern Software for Fluid Dynamics Problems	257
11.1. Modeling of fluid dynamics: main challenges and ways to overcome them ...	260
11.1.1. Computational domain in numerical models	260
11.1.2. CFD ways of solving simulation problems	261
11.1.3. Building the computational meshes. Mesh builders	263
11.2. Some examples of modern CFD software. Basic properties	264
11.2.1. ANSYS Fluent	264
11.2.2. Phoenix	266
11.2.3. STAR-CD	267
11.2.4. Specialized software	269
12. Algorithm of Thermo-Gas Dynamic End Heat Transfer Modeling for Turbine Blades	271
12.1. Eulerian models	272
12.2. Cooling via internal convective flows	273
12.3. Fundamentals of film cooling performance	292
12.3.1. Correlations of film cooling performance	299
12.4. A conjugate heat transfer method for turbine blade cooling	306
