Abstract	2
Figures	8
Tables	20
Terminology	21
Chapter 1	
1. Literature review	25
1.1 Introduction	25
1.2 State of the art	26
1.2.1 Civil engineering applications and general information	26
1.2.2 Principles	33
1.2.3 The material	35
1.2.3.1 Characteristics of the composite material	35
1.2.3.2 Behaviour of the material when subjected to bending stress	37
1.2.4 Mix design	39
1.2.4.1 Manufacture	39
1.2.4.2 Classification of building components	41
1.2.4.3 Granular design	43
1.2.4.4 Mixing problems	43
1.2.4.5 Ingredients	46
1.2.5 Micro-mechanics.....	47
1.2.5.1 Fiber in concrete	47
1.2.5.2 Micro to Macro	50
1.2.5.2.1 Fibre fracture and flexibility	50
1.2.5.2.2 Characteristics of GFRC	52
1.2.5.2.2.1 General characteristics	52
1.2.5.2.2.2 Time-dependent material properties	55
1.2.5.2.2.3 Classification of GFRC	55
1.2.5.2.2.4 Material testing	57
1.2.6 Macro-mechanics	58
1.2.6.1 Macro fracture	58

1.2.7	Fiber products in concrete	60
1.2.8	Scale factor	64
1.2.8.1	Ultimate limit state	64
1.2.8.2	Serviceability limit state	65
1.2.9	Standards and recommendations	66
1.2.10	Analysis of present statement	67
1.3	Tasks of the research	68
1.4	The aim of this research	69
 Chapter 2		
2.	Fresh Concrete	70
2.1	Introduction	70
2.2	Mix design	75
2.3	Mixing problems	79
2.4	Vibration	83
2.4.1	Mixing and casting rationalization.	83
2.4.2	Dynamical analysis of glass fiber motion inside concrete composite.....	84
2.5	Conclusions.....	97
 Chapter 3		
3.	Matured concrete	98
3.1	Introduction	98
3.2	Micro-mechanics (2D).....	98
3.2.1	Single fiber pull-out test	99
3.2.2	Two fibers pull-out test	106
3.2.3	Glass fiber bundle pull-out test	108
3.2.4	Single glass fiber with angle pull-out test.....	113
3.2.5	Stresses	118
3.2.5.1	Situation of bonding strength (with-out friction)	118
3.2.5.2	Situation of sliding motion (with friction)	121
3.2.6	Analytical model	124
3.2.6.1	The shear lag model	124
3.2.6.2	Analysis of single fiber pull-out stages	131
3.3	Micro-mechanics (3D)	138
3.3.1	Single fiber pull-out test	139
3.3.2	Single glass fiber with angle pull-out test	146

3.3.3	Glass fiber bundle pull-out test	149
3.4	Fiber pull-out experiments	152
3.4.1	One and two fibers pull-out experiments	152
3.4.2	Pull-out experiments for a few fibers and a fiber bundle	160
3.5	Finding the critical length of glass fiber bundle l_c and the fiber yield strength σ_{fy}	165
3.6	Finding the friction coefficient between glass fiber and concrete $Fri_{(GF,C)}$	167
3.7	Identification of the critical length of a single fiber	173
3.8	Conclusions	174

Chapter 4

4.	Fiber concrete beams	175
4.1	Introduction	175
4.2	Beam reinforcement	176
4.2.1	Beam without traditional reinforcement	176
4.2.2	Beam with traditional reinforcement	178
4.2.3	Flexural strengthening with fibrosheet	180
4.3	Experimental program	182
4.3.1	Geometry, loading and supporting conditions of the beam	182
4.3.2	Materials	185
4.3.3	Mix design	185
4.3.3.1	Glass fiber mixes	186
4.3.3.2	Carbon fiber mixes	186
4.3.4	Results	186
4.3.4.1	Force and stress-midpoint deflection diagrams for glass fiberconcretes	186
4.3.4.2	Stress-midpoint deflection diagrams for carbon fiber concretes	187
4.3.4.3	Tensile strength investigation	189
4.3.4.4	Tensile fracture micro-mechanics	191
4.3.4.5	Microscopic analysis	196
4.4	Test of the theory	203
4.5	Conclusions	206

Chapter 5

5. Failure prediction	207
5.1 Introduction	207
5.2 Steel straight fibers	208
5.2.1 Material behaviour under bending test	208
5.2.2 SFRC beam crack modeling	210
5.2.3 Results	214
5.2.4 Conclusions	216
5.3 Glass fiber bundles	217
5.3.1 Material behaviour under bending test	217
5.3.2 Results	220
5.3.3 Conclusions	221
5.4 Carbon fibers	222
5.4.1 Material behaviour under bending test	222
5.4.2 Results	224
5.4.3 Conclusions	225

Chapter 6

6. Fiberconcrete Standards and Recommendations	226
6.1 Introduction	226
6.2 Bending test of the glass fiber reinforced concrete	227
6.2.1 Device and sample characteristics	227
6.2.2 Deducing the material standard characteristics from the test	228
6.2.3 Serviceability limit state SLS requirements	231
6.2.4 Ultimate limit state ULS requirements	232
6.3 Parameters that influence the aspects of critical fiber content ρ_{crit}	233
6.4 Conclusions	237

Chapter 7

7. Conclusions	238
